Abstract

Online network such as article and face book are full of data. According to the existing work I have implemented the system to predict the Colombo Stock exchange future prices. In this application can help to new comers to investing market. Also it gave wonderful opportunity to learn lot new technologies and programming skill. Application can currently predict the prices of the stock market, gave the result of previous price using companies history. In the future I'm hoping to add more features to this application and trying come up with as final product

Key Words: Machine Learning, Text Classification, Natural Language Processing
