Abstract

The purpose of this research is to identify the extent of the problem with existing measures taken to provide an equal education for all students so they can all benefit from the same level of resources and have an equal opportunity in the labor market when they have completed their education. Research was conducted on the existing methods as well as the effects of the Coronavirus Disease 2019 pandemic that caused a shift in the techniques on how the education industry continued its teaching to students. The effects of the No Child Left Behind, Every Student Succeeds and the Elementary and Secondary Education acts were evaluated, and all the limitations of these acts have been discussed. The use of online methods to address this is discussed within this research and a prototype for a video analysis system is developed for this purpose.
