Abstract

The name of the system is called "Personality Report Generating CV Reader". As the name implies the purpose of the system is to generate a personality report based on the CV. The owner of the CVs personality will be analyzed based on the CV data.

Due to lack of data in the CV, the system will also take the applicants twitter tweets and Facebook status details to analyze the applicant's personality. The applicant's latest statuses and tweets will be taken into the system, analyzed and a report shall be generated.

The user will also be requested to fill in some questions to get more details for the personality test. Fifteen questions will be provided and the user will be given three choices on whether he/she agrees, neutral or disagrees. These data will be taken into account during analysis.

The applicant's statuses and tweets will only be taken into analysis of the personality of the user. Photos and videos and shared similar stuff will not be taken into account when analyzing the data. As it can affect the accuracy of the system only the statuses and tweets will be taken as relevant data to be analyzed.
